Make Plans to Attend BADGE Users Conference in Dallas!

This year's conference will be held **November 6th through November 8th, 2006 at the Embassy Suites Market Center Hotel in Dallas**. Administrators and users of all BADGE software products, including BADGE SE, CAD SE, Mobile SE, COURT SE, and MobileCite are invited to attend. Technology is an ever-evolving entity that requires initiative to stay current. At Cardinal Tracking, our goal is to equip our customers with the tools needed to stay on top. The Cardinal Tracking annual Users Conference is a key component of that solution.

Participating in a Users Conference is an opportunity for our customers to refresh their understanding of products and applications and to make sure they're getting the very maximum return on their investment. It's a chance to mix and mingle with other users and Cardinal employees, ask questions, voice opinions, and learn about product enhancements, new developments and new product introductions. If you would like to share your experiences with other Cardinal clients, we are seeking speakers. Speakers can attend the conference at no cost. Contact Cardinal's Lisa Vick for more info on being a speaker. (lvick@cardinaltracking.com or 800-285-3833)

A block of rooms have been reserved for conference attendees at \$85 per night. The cost for the Users Conference will be \$399.00 per person with a discount for agencies registering early or with multiple attendees. We will post details, including the conference agenda on our website in the near future. (www.cardinaltracking.com) - See you in November!

Join Cardinal's Client Forum Online - It's Easy!

We have changed our **Online Client Forum** to make it even *easier* for you to communicate with other Cardinal Tracking users. Just go to our web site at www.cardinaltracking.com, click on "Support" from the menu bar at the top. Then click on "Client Forum". Follow the instructions for registering and you will be Connected! Share information, opinions, and crystal reports with other Cardinal Clients. If you click on the "Crystal Reports—BADGE SE" Forum, you will see a number of available Crystal Reports that you can download and use. We have written these reports based on requests from clients, so feel free to utilize them. One of the main reasons we invested the time in setting up the Client Forum was to encourage all of our clients to start communicating and sharing ideas with each other. If you are looking for a particular Crystal Report, there is a good chance one of our other clients already has created it...so just post a message describing what you are looking for. There are separate areas for BADGE, Court, MobileCite, and TickeTrak clients. So jump in, get registered and start communicating with your fellow Cardinal users.

"The CAD SE Mapping Module allows Dispatchers to see where the Calls are occurring

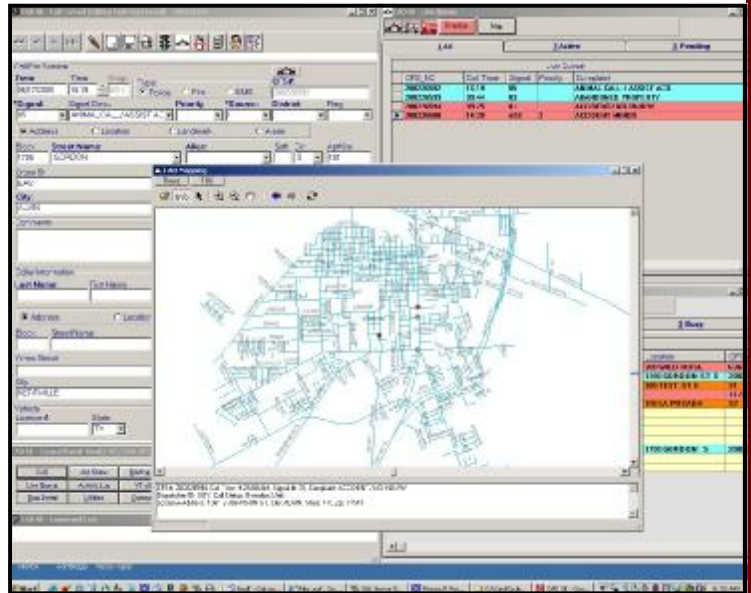

The BADGE SE Mapping Module plots locations for

Crimes and Incidents, as well as Accidents and Citations"

Mapping for CAD SE and BADGE SE

The new CAD SE Mapping Module, allows your dispatchers to visually see where all Active Calls, Activity Logs and Traffic Stops are occurring. They can click on any call location and see related information, and they can even create a visual route showing the best way to get from one location to another and send it to Mobile SE Officer in the field.

BADGE SE users can use the new BADGE SE Mapping Module to plot specific types of Crimes occurring in a chosen date range. Accident locations can be plotted on the same map as citations issued!

For more information on Mapping Modules for CAD SE and BADGE SE, or to schedule an on-site or web based demo, contact us at 800-285-3833 or sales@cardinaltracking.com

MobileCite Automated Citation Issuance System

"Quickly issue Citations using a Handheld or Laptop Computer"

Are your court and police department staffs still manually entering citation information? Many cities are drastically reducing this workload by implementing Cardinal's MobileCite Automated Citation Issuance System.

MobileCite allows police officers to utilize a handheld or laptop computer to quickly and efficiently issue citations of any kind. An integrated magcard reader on the handheld or laptop makes capturing data stored on the violator's drivers license quick and easy. The officer then completes the other required information by choosing from pre-defined drop down lists and check boxes. MobileCite even captures all required Racial Profiling Data.

Officers can choose to add multiple violations and/or

warnings on a single citation (depending on the requirements of your city).

A ruggedized Zebra Thermal Printer is used to quickly print the citation. You have the option to capture the defendant's signature on the handheld, as well as the officer's signature, again depending on the needs of your city.

Citation data is downloaded to the MobileCite database either wirelessly or through the use of a cradle. The data is then exported to your BADGE SE and COURT SE databases.

If you utilize a different Court System from another vendor, we can create the necessary export file for your vendor. We have a number of MobileCite users that utilize Court Systems from Incode

and UDS. We have also recently added the capability to scan licenses with 2D Barcodes so clients in Oklahoma and other states can utilize MobileCite.

Officers can add diagrams, pre-defined notes, or record voice notes for each citation.

Current MobileCite Clients include:

- Keller, Texas
- Pantego, Texas
- Richland Hills, Texas
- Oak Ridge North, Texas
- Argyle, Texas
- Forney, Texas
- Alvarado, Texas
- Royce City, Texas

For more information on MobileCite, or to schedule an on-site or web based demo, contact us at 800-285-3833 or sales@cardinaltracking.com

Laserfiche Document Imaging Module

At the request of a number of our clients, Cardinal has partnered with **Laserfiche** to incorporate document imaging capabilities for our software products. The optional module allows a user to scan a document and associate it with records in BADGE SE or COURT SE. So, for example a court clerk can scan any number of documents and associate them with a Docket record, or a police detective can scan documents and link them to a case he is working on. An icon on the screen shows the user whether there are any document images linked to the record. If there are, simply click on the icon to see the documents and print them out if desired. There are other features including OCR (Optical Character Recognition) for printed documents. We will be sending clients more info in the near future. Bastrop Municipal Court will be the initial client site. We expect to have the Module available for any COURT SE or BADGE SE agencies in the fall. If you have any questions about pricing, scanners, or anything else, you can contact your regional sales manager or Cardinal's Brian Jenkins at 800-285-3833, Ext135 or bjenkins@cardinaltracking.com.

What's New?

Auto Update Service - Cardinal has successfully deployed the Auto Update Service at the vast majority of BADGE SE and COURT SE client agencies. If you do not have the service yet, please contact Cardinal's Customer Support department so we can schedule your installation. You can call our toll free number or email us at support@cardinaltracking.com. There is no charge, and you will benefit by always being notified and automatically updated whenever a new version of your software is released from Cardinal.

New BADGE SE Release - Watch the Auto Update Service to get the latest BADGE SE release. A number of new features are in this release, including a new "Date Range Search" within the Incident Module, and "Quick Link" buttons in the "Related Information" section of the Incident Module. Recent updates to the program provide even stronger and more accurate validation rules to prevent and eliminate user data entry errors – the number one cause of inaccurate UCR/NIBRS reporting .

New MobileCite Release - A new version of MobileCite handheld software is scheduled for release in October. The new release includes several new data fields clients have requested and a much faster load time when starting the application. Officers can also pre-define the number of copies of the citation to print. Lastly, the new release is designed to operate on a wider variety of the newest handhelds, including the TDS Recon X Series, and Casio's IT3000 unit which includes an integrated printer.

Tech Tips:

Tracking Sex Offenders - Most states have their own sex offender database, but some BADGE SE users still want to be able to track these people on their local system. You can enter these people using the Field Interview Module. Your System Administrator can use the Field Codes Utility to pre-define codes and descriptions. Add "SO" in the "Code" field and give it a description of "Sex Offender". Several clients use a code of "CT" to indicate and track Criminal Trespass Warnings. The Field Interview Module can be used to enter any person into your database, even though they have not been arrested or associated with an Incident Report. You can use the "Code" or "Flag" fields categorize the person in the way that matches your agency's needs. You can also use the "Caution" and "Flag" fields in the Master Name Module associate certain codes with the person.

Accident Module Narrative - We encourage all customers to use the existing notepad within the Accident module instead of cut and paste from MS Word. There are times were specific formatting can be misinterpreted during the paste function. It appears to be easier to use the notepad and preview the report for more consistency.

Contacting Customer Support - If you are contacting Cardinal's Customer Support department by email, please use the departmental address (support@cardinaltracking.com) instead of individual addresses of support personnel. Sometimes support staff could be on vacation or sick and your request would not be replied to. We want to provide you the best support possible and by using the departmental address, we can route your request to the appropriate support staff member that is available..

Customer Advisory Board Formed

The Cardinal Customer Advisory Board was established to provide an ongoing dialogue between the company and representatives of Cardinal's customer base. The members represent agencies of varying size from around the country. They volunteer their time to improve the lines of communication and overall product quality on behalf of all customers. What does a CAB member do?

More information will follow in a detailed email in the next few weeks. You may also contact Randy Sellers at (800)285-3833 or rsellers@cardinaltracking.com

Crystal Reports Training

Cardinal has created a new key relationship with Crystal Training Source. They specialize in providing on-line and on-site Crystal Training. Our goal was to find a vendor that could help our customers become stronger in their Crystal Reports skills to create customized reports from the Cardinal database. You may contact them for detailed information regarding training and be sure to mention you are a Cardinal customer to receive the discounted pricing.

Crystal Training Source will also be providing a refresher, intermediate and a workshop class at the November Users Conference in Dallas.

Tech Tips Continued

COURT SE - The latest CourtSE release is 1.0.48 dated 07/21/2006. If you are not running this version then please contact Technical Support or check the Auto Update for the latest executable.

New feature for CourtSE: You can now set a prefix for the docket number which will allow you to set docket numbers with leading zeros. You can now enter 06- as your prefix then enter the last number used for docket number as 0 giving you a docket number of 06-1 allowing you to keep track of the number of violations written for the year.
