

Court SE

Court SE™ is a fully integrated, easy to use Court Records Management System designed specifically to meet the daily case management needs of municipal courts. **Court SE™** provides court clerks and administrators the information needed to perform the full range of their complex duties. All functions of the court are automated, tracking each case from the time a citation is issued until final disposition.

While **Court SE™** is powerful, it's also user friendly – incorporating many ideas and suggestions from our clients over the years. Citation data may be easily entered in the system or imported from Cardinal's **MobileCite™** handheld or laptop automated citation issuance system. Master files are utilized to reduce the need to re-enter duplicate information for persons, vehicles and codes. Docket numbers can be automatically assigned by the system, manually entered, or the citation number can be automatically assigned as the docket number. Citations may contain one or multiple violations. The fines and fees associated with each type of violation are automatically calculated and assigned to each case. Information can be entered to track all significant dates and all persons related to cases. Payments can be received and applied to cases and partial payment schedules can be initiated and tracked. Bonds can be posted, forfeited or applied to payments. Credit can also be applied to cases for community service or jail time. Notes may be attached to each case.

Court SE™ automates the process of preparing statistical reports required by the State as well as a variety of management reports for the individual court. A "template editor" allows the court to define and create complaints, letters, subpoenas, warrants and other types of documents to be printed. Complaint forms and warrants for each type of violation are agency defined. Warrants may be generated in batch mode based on user selected criteria.

Court SE™ even includes a web interface to **TrafficPayment.com** that allows violators to view and pay their citations online 24 hours a day, 7 days a week. Once payment is made on-line, **Court SE** automatically updates the payment information for that case in your court system.

FEATURES

- Complete Docket, Citation, and Warrant Information Modules
- Automated Fines and Fee Calculation from user-defined tables
- Partial Payments and Adjustments
- Court and Appearance Date Scheduling
- User defined templates for Warrants, Complaints, Letters, etc.
